(54) Title: DETECTION AND ELIMINATION OF TERMITES

(57) Abstract: A bait station (26) for use in the elimination of termites comprises a hollow body having a plurality of apertures therein and a cellulosic matrix containing a termiticide occupying substantially the entire interior of the hollow body. The bait station (26) is adapted for attachment to a detector station (1) or a termite infested structure via an exposable aperture (30) by a communicator tube (29) extending between an interior region of the bait station (26) and an interior region of said detector station (1) or said structure to provide a termite pathway between said cellulosic matrix and a termite colony.
